

The Wax Paper

Home Birth Science or Propaganda?

Low-Risk PLANNED Home Birth

Baby delivered at home or birth center by a midwife after receiving prenatal care

Babies had EQUAL outcomes compared to low-risk hospital births

High-Risk ACCIDENTAL HomeBirth

Baby delivered out-of-hospital BY ACCIDENT by a taxi driver, cop, spouse, sibling, or no one
Possibly little or no prenatal care

Babies had WORSE outcomes than hospital births

Don't be fooled by **BAD SCIENCE** that Mixes **Apples & Oranges**

If someone tells you about a study that shows higher rates of deaths for babies born at home, please ask them if they are comparing apples to oranges. Studies, like the Wax Paper, that include high-risk ACCIDENTAL out-of-hospital births are going to show worse outcomes than studies that exclusively evaluate PLANNED out-of-hospital births with a skilled midwife. These more relevant studies show **no difference in risk to the baby.**
